

30/05/2016

Appropriate Assessment Screening Determination under Section 177U (5), Part XAB, Planning and Development (Amendment) Act 2010

PROPOSED DEVELOPMENT AT 132 POTTERY ROAD, DÚN LAOGHAIRE, CO. DUBLIN

Planning Ref: -PC/H/04/16

An Appropriate Assessment screening determination has been made by Dún Laoghaire-Rathdown County Council regarding the application for a residential development at 132 Pottery Road, Dún Laoghaire, Co. Dublin.

This decision has been informed by information prepared by Scott Cawley Ltd. on behalf of the Council - Appropriate Assessment Screening Report dated 29th May 2016. This AA Screening report describes the nature of the proposed development, the nature of the European sites within its zone of influence and the relationship between the two such that any impact pathways could be identified. It sets out the nature of the proposed works and assesses any potential for direct, indirect or cumulative impacts of the proposed works on all relevant European Sites.

The Council has examined likely significant effects of the proposed works on European Sites within the zone of influence of the proposed works, in light of the specific Qualifying Interests and conservation objectives of all relevant European Sites.

Having reviewed and considered this Appropriate Assessment Screening Report and general information on the nature of the project, the Council has been able to conclude that there was no likelihood of any significant effects on any European Sites arising from the proposed works, either alone or in combination with other plans or projects. The main reasons for this are as follows:

1. The temporary nature of any discharges related to construction on the site and the short duration of the construction phase of the project;
2. The significant distance between the site, Dublin Bay and Killiney Bay and potential for dilution in the drainage network.
3. There is no risk of disturbance to Special Conservation Interest bird species given the relatively small scale and temporary nature of construction works associated with the proposed development and the distance between the proposed development and the European sites.

Therefore it is our view, in relying on the information prepared by Scott Cawley and details in the planning application documentation, that an Appropriate Assessment is not required for these proposed works.

Yours sincerely,

Maura Hickey
Housing Department

1 Introduction

This report which contains information required for the competent authority (in this instance Dún Laoghaire-Rathdown County Council) to undertake a screening exercise for Appropriate Assessment (AA), was prepared by Scott Cawley Ltd. on behalf of the applicant. It provides information on and assesses the potential for the proposed development to significantly affect Natura 2000 sites (hereafter "European sites"¹).

It is necessary that the proposal has regard to Article 6 of the *Council Directive 92/43/EEC of 21 May 1992 on the Conservation of Natural Habitats and of Wild Fauna and Flora* (as amended) (hereafter "the Habitats Directive"). This is transposed in Ireland primarily by the *European Communities (Birds and Natural Habitats) Regulations 2011 (S.I. No. 477/2011)* (hereafter the Birds and Habitats Regulations) and the Planning and Development (Amendment) Act, 2010 as amended.

An AA is required if likely significant effects on European sites arising from a proposed development cannot be ruled out at the screening stage, either alone or in combination with other plans or projects.

Following the preparation of this screening statement it was objectively concluded that there was no likelihood of any significant effects on any European sites arising from the proposed development, either alone or in combination with other plans or projects. Therefore it was our view that an Appropriate Assessment was not required in this instance. The information in the tables below provide a summary of the information gathered for this screening exercise and the conclusions made.

2 Methodology

This Screening Statement for Appropriate Assessment was prepared with regard to the following guidance documents, where relevant:

- *Appropriate Assessment of Plans and Projects in Ireland - Guidance for Planning Authorities*. (Department of Environment, Heritage and Local Government, 2010 revision).
- *Appropriate Assessment under Article 6 of the Habitats Directive: Guidance for Planning Authorities*. Circular NPW 1/10 & PSSP 2/10.
- *Assessment of Plans and Projects Significantly Affecting Natura 2000 sites: Methodological Guidance on the Provisions of Article 6(3) and (4) of the Habitats Directive 92/43/EEC* (European Commission Environment Directorate-General, 2001); hereafter referred to as the EC Article 6 Guidance Document. The guidance within this document provides a non-mandatory methodology for carrying out assessments required under Article 6(3) and (4) of the Habitats Directive.
- *Managing Natura 2000 Sites: The Provisions of Article 6 of the Habitat's Directive 92/43/EEC* (EC Environment Directorate-General, 2000a); hereafter referred to as MN2000.
- *Guidance Document on Article 6(4) of the 'Habitats Directive' 92/43/EEC. Clarification of the Concepts of Alternative Solutions, Imperative Reasons of Overriding Public Interest, Compensatory Measures, Overall Coherence*. Opinion of the European Commission (European Commission, January 2007).

¹ Natura 2000 sites are defined under the Habitats Directive (Article 3) as a European ecological network of special areas of conservation composed of sites hosting the natural habitat types listed in Annex I and habitats of the species listed in Annex II. The aim of the network is to aid the long-term survival of Europe's most valuable and threatened species and habitats. In Ireland these sites are designed as *European sites* - defined under the Planning Acts and/or Birds and Habitats Regulations as (a) a candidate site of Community importance, (b) a site of Community importance, (c) a candidate special area of conservation, (d) a special area of conservation, (e) a candidate special protection area, or (f) a special protection area. They are commonly referred to in Ireland as candidate Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

- *Guidelines for Good Practice Appropriate Assessment of Plans under Article 6(3) Habitats Directive*. Findings of an international workshop on Appropriate Assessment in Oxford, December 2009².
- *Communication from the Commission on the precautionary principle*. European Commission (2000b).

The above referenced guidance sets out a staged process for carrying out Appropriate Assessment. To determine if Appropriate Assessment is required, documented screening is required. Screening identifies the likely effects on European sites, if any, which would arise from a proposed plan or project, either alone or in combination with other plans and projects.

If the conclusions at the end of screening are that there is no likelihood of significant effects occurring on any European sites, as a result of the proposed plan or project, either alone or in combination with other plans and projects, then there would be no requirement to undertake Appropriate Assessment.

However, even if screening makes a finding of no significant effects, and therefore concludes that Appropriate Assessment is not required, these findings must be clearly documented in order to provide transparency of decision-making, and to ensure the application of the 'precautionary principle'³.

Screening for Appropriate Assessment involves the following:

- Determining whether a project or plan is directly connected with or necessary to the conservation management of any European sites⁴;
- Describing the details of the project/plan proposals and other plans or projects that may cumulatively affect any European sites (see Table 1);
- Describing the characteristics of relevant European sites (Table 2); and
- Assessing the likelihood and significance of effects on relevant European sites (see Table 2).

The information that was collected to allow the competent authority to screen the proposal was based on a desktop study carried out on the 29th May 2016. Information relied upon included the following information sources, which included maps, ecological and water quality data:

- Ordnance Survey of Ireland mapping and aerial photography available from www.osi.ie;
- Online data available on European sites as held by the National Parks and Wildlife Service (NPWS) from www.npws.ie;
- Information on land-use zoning from the online mapping of the Department of the Environment, Community and Local Government <http://www.myplan.ie/en/index.html>;
- Information on water quality in the area available from www.epa.ie;
- Information on the Eastern River Basin District from www.wfdireland.ie;
- Information on soils, geology and hydrogeology in the area available from www.gsi.ie;
- Information on the location, nature and design of the proposed development supplied by the applicant's design team;

² Available online at <http://www.levett-therivel.co.uk/AAguidelines.htm> Accessed December 2013

³ One of the primary foundations of the precautionary principle, and globally accepted definitions, results from the work of the Rio Declaration. Principle #15 declaration notes:

"In order to protect the environment, the precautionary approach shall be widely applied by States according to their capabilities. Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation."

⁴ In this instance the proposed development is not directly connected with or necessary to the conservation management of any European sites.

- Information on the status of EU protected habitats in Ireland (National Parks & Wildlife Service, 2013a & 2013b);
- Information on the conservation status of birds in Ireland (Colhoun & Cummins, 2014).

The following planning and policy documents were relevant to the subject lands, in particular with regard to the assessment of other plans and projects with potential for cumulative effects

- *National Biodiversity Plan 2011 – 2016 (Department of Arts, Heritage and the Gaeltacht, 2011);*
- *Draft County Development Plan 2016-2022 (Dún Laoghaire-Rathdown County Council, 2016);*
and,
- *Eastern River Basin District, River Basin Management Plan 2009-2015.*

Table 1 Overview of the Proposed Development and its Receiving Environment

<p>Brief Site Description</p>	<p>The subject lands are located at 132, Pottery Road in Dún Laoghaire Co. Dublin (Grid Reference: O 23296 26084). The proposed development site consists of the existing building on Pottery Road and currently comprises a single storey unoccupied dwelling surrounded by amenity grassland.</p>
<p>Features of the Surrounding Environment</p>	<p>The desktop study found no records of any species or habitats for which European sites listed in Table 2 were designated within the subject lands or environs⁵.</p> <p>The proposed development site is located within the Coastal 08 river catchment. According to the EPA Envision Map Viewer, the nearest watercourse is the Kill of the Grange Stream, located c. 150m southwest of the proposed development site. This stream is open in parkland in this area for the majority of its course before it flows into Killiney Bay near Ballybrack.</p> <p>Foul effluent generated from the proposed development will be discharged to the existing sewer system, which is located on Pottery Road. From there it will be transferred to Shanganagh Wastewater Treatment Works (WWTW) for treatment prior to discharge into Dublin Bay. According to the EPA Envision Map Viewer Killiney Bay's coastal waters are "Unpolluted". Under the "Trophic Status Assessment Scheme" classification of the EPA, "Unpolluted" means there have been no breaches of the EPA's threshold values for nutrient enrichment, accelerated plant growth, or disturbance of the level of dissolved oxygen normally present (EPA, 2015). The most recent available water quality data for the Irish Sea indicates it is 'Unpolluted'</p>
<p>Description of the Proposed Development</p>	<p>In brief, the proposed development will involve demolition of the existing building and construction of a new residential development comprising four apartments with gardens and balcony gardens.</p> <p>There is no net change in the level of occupancy in terms of generation of foul effluent. Full plans and elevations and details of the proposed development are provided in the Part 8 application documentation.</p> <p>Surface water generated from the proposed development will be discharged to the existing combined sewer located on Pottery Road. Foul effluent generated from the proposed development will be discharged to the existing sewer located on Pottery Road. From there, it will be transferred to Shanganagh WWTW to be treated prior to discharge into Dublin Bay.</p>
<p>Other existing or proposed plans or projects nearby which may lead to cumulative effects on European sites.</p>	<p>Existing habitat loss pressures</p> <p>The subject lands do not physically overlap with any European sites. They appear to be dominated by the existing building and hardstanding ground, none of which are habitats listed under Annex I of the Habitats Directive. These habitats are not indirectly connected with any habitats within European sites (e.g. by groundwater). No mobile fauna species for which European sites are designated are known to use the habitats within the subject lands. There is therefore no potential for cumulative effects relating to habitat loss.</p>

⁵ According to NBDC online data www.biodiversity.ie accessed 29th May 2016. This excludes NBDC records with a resolution greater than 1km².

Table 1 Overview of the Proposed Development and its Receiving Environment

**Existing pressures on water quality within European sites in proximity to the site
Pressures on European sites in Killiney Bay from surface waters**

There is potential for 'in-combination' effects of proposed plans and projects within the *Dublin City Development Plan 2011-2017*, draft *Dún Laoghaire-Rathdown County Development Plan 2016-2022*, *Fingal Development Plan 2011-2017* and other county level land use plans which can influence conditions in Killiney Bay via rivers and other surface water features. Killiney Bay is of 'Unpolluted' water quality status and the pollutant content of future surface water discharges to the Bay is considered likely to be decreased in the long-term. This is because it is an objective of the Greater Dublin Strategic Drainage Study, and all development plans within the catchment of Shanganagh WWTW to include Sustainable Urban Drainage Systems in new development. Together these objectives are considered likely to reduce pressures on designated marine and intertidal species and habitats in Killiney Bay.

Other planning applications in the surrounding area

In the draft *Dún Laoghaire-Rathdown County Development Plan 2016 – 2022*, the proposed development site is zoned as 'R2 – Existing Residential'. The lands in the vicinity of the proposed development site are zoned as R2 or as "C2.1 - Industrial, enterprise, employment" 'E To provide for economic development and employment.'

Given the urban nature and zoning objectives of the area, there is likely to be a number of planning applications within the zone of influence of the project which have the potential to produce 'in combination' effects on water quality in Dublin Bay if the construction of these projects was to coincide with the construction phase of the proposed development. However, the likelihood of impacts arising from the proposed development is deemed to be low due to the minimal scale of the proposed works, the urban land buffer between the site from Killiney Bay (i.e. >1km) as well as the nature, scale and temporary duration of the proposed works. No impacts are predicted during the operational phase of the proposed development, as neither foul effluent nor surface water runoff will be generated.

Conclusion for potential in-combination effects from surface waters during construction phase

It is our professional opinion that there will be no likelihood of significant effects on any European sites during the construction or operation of the proposed development, in combination with other plans or projects. This judgement was reached on the basis that:

- The coastal waters in Killiney Bay are classed as 'Unpolluted' by the EPA;
- It is an objective of all development plans within the catchment of Shanganagh WWTW to include Sustainable Urban Drainage Systems for all new developments;
- The sewage treatment plant at Shanganagh provides full secondary treatment prior to discharge from the sea outfall and hence there are no potential impacts likely to occur on Natura 2000 sites.
- In the unlikely event of a pollution event occurring during construction, this would not be of such a magnitude that it would have a significant adverse effect on water quality in Killiney Bay.

European sites within 1km, 5km and 15km of the proposed development site are shown in Figure 1 overleaf.

Table 2 Analysis of European sites within 15km.

Site name and code	Distance from Proposed Development (approximate)	Reasons for designation ⁶ (* = Priority Habitat)	Relevant source-pathway-receptor links between proposed development and European site? No sites are "Relevant" to the Proposed Development. (European sites are "Relevant" where a relevant source-pathway-receptor link exists).
Special Areas of Conservation (SACs)			
South Dublin Bay SAC (000210)	Located c. 3km north of the proposed development site	<p>Conservation Objectives Version 1.0 (22/08/13)</p> <p>Annex I Habitats:</p> <ul style="list-style-type: none"> Mudflats and sandflats not covered by seawater at low tide [1140] 	<p>Whilst there is a potential linkage between the proposed development and the European site, no significant effects are predicted.</p> <p>1. Surface waters generated during construction and operation could carry silt, oils, or other chemicals into the local surface water sewer network which discharges to Killiney Bay. However, there will be no significant effects on the reasons for designation of the European site in view of the relevant conservation objectives. This judgement was informed by:</p> <ul style="list-style-type: none"> The temporary and small scale nature of any discharges related to construction of the site; The urban land buffer that exists between the site and Killiney Bay and potential for dilution in the

⁶ "Qualifying Interests" for SACs and "Special Conservation Interests" for SPAs based on relevant Statutory Instruments for each SPA, and NPWS Conservation Objectives for SACs downloaded from www.npws.ie in February 2016.

⁷ For significant effects to arise, there must be a risk enabled by having a 'source' (e.g. construction works at a proposed development site), a 'receptor' (e.g. a SAC), and a pathway between the source and the receptor (e.g. a watercourse connecting a proposed development site to a SAC). The identification of a pathway does not automatically mean significant effects will arise. The likelihood for significant effects will depend upon the characteristics of the source (e.g. duration of construction works), the characteristics of the pathway (e.g. water quality status of watercourse receiving run-off from construction) and the characteristics of the receptor (e.g. the ecology including conservation status of the SAC reason for designation). When expert judgment determines, that significant effects are likely to arise, both the pathway, and the European site are considered "Relevant", and an Appropriate Assessment is triggered.

3 Conclusions of the Screening Assessment

Following an examination, analysis and evaluation of the relevant information including, in particular, the nature of the proposed development and the potential relationship between the proposed development and relevant European sites and, applying the precautionary principle, it is the professional opinion of the authors of this report that there will be no likelihood of significant effects on any European sites, arising either from the proposed development alone or in combination with other plans or projects.

Therefore it is our view that an Appropriate Assessment is not required for the works proposed.
