10.06.2026	Blackrock Baths	It is constantly used. The issue us that a lot of algae starts to accumulate every year from Ju e onwards. The water is so clear up until that point. Can the beach area be cleaned during the summer months to keep the water clean? The same happens at Seapoint to a lesser degree. It just needs a tractor with a landscape rake to collect the algae which can then be loaded and composted.
23.06.2026	Blackrock Baths	This is a regularly used swimming spot for locals. Every day throughout the year, there are people here swimming at high tide and for two hours either side of high tide. I swim here once per week minimum, with my mother (aged 78), my daughter (aged 15) and friends. When I swam here on the 15th June I counted 7 people there at high tide, and today on the 23rd June in the morning I counted 12 people there swimming at 7.30am.
